

## Primary Screen Report

---

### *Contact and Biographical Information*

Date:	
Title of Screen (screen ID):	
Lead Screener:	
P.I.:	
E-mail for primary contact:	
Date primary screen initiated:	
Date primary screen completed:	
Number of compounds screened:	
Number of screening positives (hit "strength" and rate):	

---

### *Screen Documentation*

1. Please provide the exact assay protocol for your screen, including all experimental details (i.e., reagent composition and volumes, incubation times, equipment used). If you performed a counterscreen, please also include that protocol information at the same level of detail.
2. Please provide a summary of your experimental protocol, in a format similar to what you would use for publication in a scientific journal.
3. Please briefly summarize and discuss your screening data. For example, describe your positive and negative controls and how these controls performed relative to experimental wells in the assay.
4. Please describe how you defined your positives, including how the results were calculated and how to interpret them. For example, if you defined your screening positives as strong, medium, and weak using cut-off ranges, please give the signal ranges. It is important that the description of your data analysis and definition of positives is as specific and clear as possible. Detailed instructions are provided in the Data Deposition Guidelines, which are available at the ICCB-L Website (<http://iccb.med.harvard.edu/>).

---

## ***Annotated Screening Data***

With this report, please submit appropriately annotated data for all compounds screened, including designation of hits. Generally, data and this report should be submitted within 1 month of completing your primary screen, or within 3 months of starting your primary screen.

---

## ***Contact Information***

Please submit annotated data and this report to: David Wrobel, Seeley Mudd Building, Room 604, Harvard Medical School, 250 Longwood Avenue, Boston, MA 02115
